

HEARTY & LUSH

Meyer Zoysia dense turf that forms a beautifully lush dark-green lawn. Because of its density, Meyer Zoysia is very resistant to weed invasion, is very tolerant to heavy wear, extremely tolerant to the cold, and moderately shade tolerant.

INSTALLATION & MAINTENANCE

INSTALLATION

Meyer does best when planted May-August. April or September are possible planting months, but the other months are not recommended. The ideal pH range for the soil is 6.0-7.0.

WATER

During sod establishment, water every day so that the soil is soaked 3-4 inches deep. Do not allow to wilt. An additional watering might be needed. The primary watering should be done between 1 p.m. and 5 p.m.

Established sod should be watered every day during the hot months and about every 4-7 days during cooler months. Be careful not to over water, or disease could set in. This is more likely when sod is dormant.

MOW

Mow every 7-10 days at 2 inches. Make sure you remove clipping to prevent build up.

SOIL & FERTILIZER

Apply 10 pounds of 10-10-10 per 1,000 feet in early spring and late summer. p.H. level of 5.5 to 7.0.

WEED CONTROL

- Early spring — Pre-emerge for grass weeds
- Spring — Post-emerge for broadleaf weeds
- Mid-summer — Post-emerge for broadleaf weeds
- Fall — Pre-emerge for grassy weeds

	Characteristics	Meyer Zoysia
Aesthetics	Leaf Blade	Wide
	Color	Deep Green
	Feel	Coarse
Function	Wear Tolerance	Excellent
	Shade Tolerance	Very Good
	Wear Recovery	Very Good
	Disease/Insect Resistance	Good
	Weeds Resistance	Very Good
Climate	Drought Tolerance	Very Good
	Drought Recovery	Good
	Cold Tolerance	Very Good
	Heat Tolerance	Excellent
Care	Mow Height	1-2"
	Maintenance Requirements	Low-medium
